

# Powerful Geography 1

## CHAPTER 1 - GEOSTory 1.5 ICEBERG ALLEY: AN UNCERTAIN FUTURE

### Activity - Using the Iceberg model

Use the Iceberg Model to write a descriptive paragraph summarising the key geographical ideas represented in GEOstory 5.

The iceberg model is a systems thinking tool used to help understand observed events or phenomenon. In the same way as only 10% of an iceberg is visible, the model is based on the invisible 'below water' factors such as trends or patterns, geographical processes, and interconnections to other systems. Adapted from My NASA Data.
